

# USSA-FFP | Fuzzy Finger™

## Overview

The Fuzzy Finger™ hot stick probe works on any hot stick universal head and offers all the functionality of a standard hotstick finger with the added utility of securely holding most standard fuse barrels available. No need to change attachments!

The Fuzzy Finger™ features replaceable nylon bristles that offer a safe and simple method to control a fuse barrel, even in high winds. The Fuzzy Finger™ is machined from lightweight, aircraft-grade aluminum, making it stronger and more durable than other probes available.

Made in the USA, patent pending.

## Using the Fuzzy Finger

Always open fuse doors using your approved work method.

1. Attach the Fuzzy Finger™ to your BLUE STRIPE® hotstick.
2. Insert the tool into the fuse cradle as shown to the right. For maximum hold, fully insert the probe. (Tip: it helps to try to ‘center’ the tool in the fuse cradle.)
3. Lift or lower the fuse door as needed.

## Repair Kit

Item Number	Description
USSA-FFP-REPAIRKIT	USSA-FFP FUZZY FINGER™ REPAIR KIT

*The repair kit comes with replacement bristles and a set screw.*
